Work Experience

2021 - Present
Front-End Developer
Empyrean Benefits Solutions

- Working as a member of an agile team, helps push a new features from design to production in less than four weeks, by completing the development and the testing of a new feature that provided a key benefit to the end user.
- Understands the Git process flow and how to resolve merge conflicts and rebase branches using terminal commands when committing and pushing code to master.
- Designs and develops a new responsive, mobile-first website using CSS, HTML, and JavaScript to increase user experience.
- Collaborates with back-end developers to implement new pages for the company platform using Model, View, and Controller, which improved the user experience and increased conversion.
- Develops user interface components and implements the UI with robust React components, resulting in faster loading time and improved user experience.
- Improves codebase readability by refactoring components using functional programming principles, resulting in improvement in code performance.

2017 - 2021
Business Systems Analyst
Empyrean Benefits Solutions

- Responsible for the system configuration and setup for clients – which includes setup, test plan execution, import configuration, and client acceptance testing.
- Oversaw the premium reporting process – after noticing the start-to-finish process – identified inefficiencies by creating automated queries and increasing time savings by 40% (22 hours a month).
- Processed and published 60 standard operating procedure guides for process utilization – ensuring start-to-finish understanding of all tasks and training.
- Utilizes front-end frameworks such as HTML and CSS for unique user interface customizations and ensures that each site is responsive across platforms. Created frameworks for system upgrades – designing user acceptance testing processes, creating quality assurance guidelines, and managing framework from migration to production.
- Increased automation of the rate calculation process by utilizing Python to create scripts, reducing manual per month and improving the accuracy of calculations.
- Wrote over 300 SQL queries to analyze and report on database data for client deliverables, Identified discrepancies that would have an impact on client cost by using SQL.
